

Rasmart is a platform based on Blockchain, specializing in expanding the potential of using financial services on the basis of a distributed registry, self-executing smart contracts and cryptocurrencies.

PROBLEMS

Low network capacity

Small latency

Transaction cost

Smart contracts restrictions

External interaction

SOLUTIONS

Volume of more than 400 000 transactions per second

Block processed around 0.2 seconds

Transaction cost less than 0,1 %

Advanced smart contracts features (cycles, schedules, etc.)

Advanced API for easy platforms integration

ADVANTAGES

Speed Availability Integrity Confidentiality Reliability Scalability Integration

A new mechanism of smart contracts providing distributed execution and ensuring acceptable reliability of results

TOKEN DETAILS

Token name: RAS

Token type: Utility

TOKEN FEATURES:

Token price: \$ 0.0038

Hardcap: \$ 1300 000

Max tokens: 1 000 000 000 RAS

Minimum buying transaction: \$

Accepted currencies: ETH

CROWDSALE DETAILS

1000 000 000 RAS - INITIAL ISSUE OF TOKENS

350 000 000 RAS - PUBLIC SALE

140 000 000 RAS - PRIVATE SALE

100 000 000 RAS - COMMUNITY, BAUNTY, ADVISERS

120 000 000 RAS - TEAM TOKEN

170 000 000 RAS - ECOSYSTEM

80 000 000 RAS - PARTNERS

40 000 000 RAS - RESERVED

ROADMAP

Stage 1

2018 Q4 - 2019 Q1

- Idea generation
- Organization of the team
- Development of the functions of the decision-making module

Stage 2

2019 Q1 - 2019 Q2

- Prototyping of the visual part of the project
- Private platform presentation, sale of tokens
- Testnet optimization
- Search for partners

Stage 3

2019 Q2 - 2019 Q3

- Refinement decision module
- Optimize API usage
- Implementing a cluster of multiple entry points
- Basic functionality of smart contracts
- Rebranding the visual part
- Wallet implementation for various platforms
- Preview version of the service data collection controller

Stage 4

2019 Q4

- Full implementation of the decision module
- Developing a split API model
- Database optimization (big data, high load)
- Implementation of the basic version of the SDK for the development of smart contracts
- New design of loading large amounts of data in explorer
- Implementation of an additional layer of data encryption
- Refinement of the functional of the collection of reliable financial data

Stage 5

2019 Q4 - 2020 Q1

- Decision Module: Parallel Processing of Pre-Transaction Pools
- The release of providing trusted data in a secure module for collecting reliable financial data
- Refinement API functionality
- Release of the release version of the smart contract SDK
- Refinement of the web wallet security system
- Wallet release version

TEAM

Raag Alexandr
CEO

Senior C++ developer, Extensive experience in startup

Levshina Svetlana
CFO

(MSU) Lomonosov Moscow State University, 27 years of successful business experience, Extensive experience in Venture Capital

Ten Inessa
Community

Public Relations in Korea

Sergey Greenberg
Senior C++

Have experience Russian Mortgage Bank, Rosgosstrakh bank.

Dergachev Boris
CTO

Senior C++ developer, have experience in Aeroflot school, MapVis

Alexandra Mertynenko
CMO

Crypto-marketer with 5 years of experience working with the blockchain startups
